

TWEET TWO'S GARDENING TIPS

Hi! I'm Taylor Tweet, or Tweet Two.
Welcome to my garden!

Plants are living things,
and they start out small
just like us!

A seed needs three
things to grow:
**water, sunlight, and
soil.**

When a seed gets all
three of those things, it
will develop roots!

Roots are important because
they **attach** the seed to the
soil, and they search for **food**.
Eventually, a baby plant bursts
through the seed and grows
toward the sky in search of
sunlight.

"GERM-I-NATION"

Germination is the process of
the seed growing into a plant.
That's a big word!

With enough
water and
sunlight, you
can grow
delicious fruits and vegetables in
your own garden! You can have
tomatoes, cucumbers,
carrots—you name it!

**Pro Tip: For a happy and
healthy garden, plant
your seeds
in the spring!**

THANKS, TAYLOR TWEET! THOSE TOMATOES LOOK DELICIOUS.

Before we move on to the next stop on our tour,
fill in the blanks of this quick quiz!

1. True or false? Plants are living things. **True / False**
2. In order for a seed to grow, it needs _____ ,
_____, and _____.
3. Roots are important because they attach the seed to the
_____, and help the seed search for _____.
4. _____ is the process of a seed
growing into a plant. (We gave you extra space to fit this big word!)
5. Two important things your garden needs are sunlight
and _____.

Great job!
Let's keep going!
